AUTOPSY REPORT

Case 73 - 3348

August 11, 1973

PATHOLOGICAL DIAGNOSIS ON THE BODY

OF

Gregory Malley Winkle  
402 West 27th Street  
Houston, Texas

Asphyxia due to strangulation.

OPINION

It is our opinion that the decedent, Gregory Malley Winkle, came to his death as a result of asphyxia due to strangulation - Homicide.

It is our further opinion that the time of death was on or about May 29, 1971.

COMMENT: Initially, the clothing which Mr. Everett Waldrop positively identified as belonging to his sons, Donald Wayne and Jerry Lynn, were submitted with the skeletal remains of Unknowns #9 and #10. The amalgam filling in tooth number 30 matched the description furnished by him for Donald and since the other skeletal criteria also were consistent with the size and age of his two sons, the skeletal remains of Unknowns #9 and #10 were released to him and interred in Georgia.

Subsequently, during the continuing process of identification of other victims, the antemortem X-rays submitted

by Dr. Robert H. Shame were compared to the postmortem radiographs of the jaws of Unknowns #9 and #13. It was then determined that the skeletal remains of Unknown #9 were actually those of David William Hilligiest and Unknown #10 were those of Gregory Malley Winkle, Unknown #13 were those of Donald Wayne Waldrop, and Unknown #14 were those of Jerry Lynn Waldrop.

On September 7, 1973, the appropriate parties were informed of the misidentification. The necessary steps were initiated to exchange the respective skeletal remains. This was accomplished during the week of September 17, 1973.

## POSTMORTEM EXAMINATION ON THE BODY OF

Gregory Malley Winkle  
402 West 27th Street  
Houston, Texas

**HISTORY:** The skeletal remains were discovered among seventeen bodies at 4500 Silverbell Street, Stall #11, Houston, Texas, between 6:00 p.m. on August 8, 1973, and 8:00 p.m. on August 9, 1973. These skeletal remains were found together with Unknown #9, in the center of Stall #11, at approximately 1:00 p.m. on August 9, 1973.

**AUTOPSY:** The autopsy was performed by Chief Medical Examiner Joseph A. Jachimczyk, M.D., assisted by Dr. Paul G. Stimson, beginning at 1:30 p.m. on August 11, 1973, in the Harris County Morgue.

**EXTERNAL APPEARANCE:** The specimen consisted of skeletal remnants and clothing remnants submitted in a crashbag. There was a pair of flowered print multicolored cotton bathing trunks, white or light cotton walking trunks with a cord drawstring, a pair of torn jockey shorts, one blue cotton stretch sock, similar to the one seen in Unknown #9, one white cotton sock, a pair of blue stove pipe trousers with a brown belt with a two prong buckle, another pair of bell bottom green, blue and red trousers, belt loops, but no belt, and brown boots with a buckle across the top and zippered on the side with a high heel. In the right boot were the figures "10-2-M". There were two fragments of a belt. There was also a short sleeved striped cotton shirt with a button down collar with a disintegrated label on the inside. There was also a short sleeved gold sport shirt, "TOWNCRAFT, J.C. PENNEY'S, SMALL, SIZE 15". There was another large brass belt buckle with two prongs to which there was an attached small segment of belt. There were two white socks. The label on the other shirt was "PERMANENT PRESS, NO IRONING NECESSARY". This was found among some of the debris. There was a recognizable skull with some hair attached. There was a varying number of bones with amorphous soft attached material. There was a gag in the mouth area. The hair was dark brown and measured up to 6 inches in length. Around the neck, there was a string of nylon cord with several nylon strands. Under the gag, there was a loose tooth. There was a gag present around the loose mandible which was in the vicinity of the maxilla. There was also an empty plastic card case recovered. At the 1st and 2nd cervical vertebrae, there was amorphous soft material within which there were multiple tiny bony chips, including

two fractured portions of the hyoid bone. The skull was that of a young male. There was deteriorating recognizable skin of a left hand. In addition to the skull and mandible, the following bones were also present. There were two scapulae. The left scapula was almost completely broken in two. There was a small crack in the right scapula at its wing. There was a total of twelve vertebrae. There was a total of twenty-seven foot bones. There was a total of eighteen ribs. The right humerus measured 12 inches; the left 13 inches. There was separation of the epiphyseal joint of the head of the right humerus. The left ulna measured 10.5 inches in length and the radius measured 9-1/2 inches. The left tibia measured 14-1/2 inches in length. The right measured 14 inches. There was epiphyseal separation of the right tibia and femur. The lower epiphysis of the left femur was present. Neither femur was present. The fibulas each measured 13.5 inches. There was a single patella, 1-3/4 inches in diameter. There was a piece of sternum, measuring 2.5 inches in length. There were two clavicles present, each measured 5.5 inches in length. Surrounding the neck area, there was a noose formed of nylon cord.

DENTAL EXAMINATION

Utilizing the Universal System, all third molars are in their crypts. Tooth 6 and 11 has mesial labial rotation, which is very prominent. Tooth 25 is crowded out to the labial. Tooth 29 is crowded to the lingual. The lower anterior teeth are crowded. There is an occlusal carious lesion in the upper left first molar, tooth 14.

Paul G. Stimson, D.D.S., M.S.

On September 9, 1973, Mrs. Winkle came to the Harris County Morgue. In the presence of Chief Medical Examiner Joseph A. Jachimczyk, M.D., and Assistant District Attorney Don Lambright, Mrs. Winkle was shown photographs of the unusual anterior dentition of her son. These were similar to a large color photograph that she had brought in. She looked at both photographs and stated that they were the remains of her son, Gregory Malley Winkle.
